	Gradual Return to Play Plan

Return to play should occur in gradual steps beginning with light aerobic exercise only to increase your heart rate (e.g. stationary cycle); moving to increasing your heart rate with movement (e.g. running); then adding controlled contact if appropriate; and finally return to sports competition.

Pay careful attention to your symptoms and your thinking and concentration skills at each stage or activity. After completion of each step without recurrence of symptoms, you can move to the next level of activity the next day. Move to the next level of activity only if you do not experience any symptoms at the present level. If your symptoms return, let your healthcare provider know, return to the first level and restart the program gradually.

- Day 1: Low levels of physical activity (i.e. symptoms do hot come back during or after the activity). This includes walker, light jogging, light stationary biking, and light weight lifting (low weight—moderate reps, no bench, no squats).
- Day 2: Moderate levels of physical activity with body/head movement. This includes moderate jogging, brief running, moderate intensity on the stationary cycle, moderate intensity weight lifting (reduce time and or reduce weight from your typical routine).
- Day 3: Heavy non-contact physical activity. This includes sprinting/running, high-intensity stationary cycling, completing the regular lifting routine, non-contact sport specific drills (agility—with 3 planes of movement).
- Day 4: Sports specific practice.
- Day 5: Full contact in a controlled drill or practice.
- Day 6: Return to competition.
